

BUILD A BOT // JUDGING CRITERIA

[100-POINT EVALUATION SCALE]

Each team is evaluated on a 100-point scale. Judges may award scores in 0.5-point increments within each criterion.

CRITERION & MAX MARKS	CORE EVALUATION FOCUS & KEY ASPECTS	SCORING GUIDE & PERFORMANCE BANDS
01. PROBLEM DEFINITION & RELEVANCE [20 MARKS]	Evaluate identification & domain understanding: ■ Problem clarity - Clearly formulated & defined? ■ Relevance - Fits the selected technology domain? ■ Understanding - Clear grasp of problem & users? ■ Solution alignment - Directly addresses the issue?	0-5 Poor / largely irrelevant 6-10 Reasonably defined; some relevance 11-15 Clear, relevant; good understanding 16-20 Exemplary definition; strong alignment
02. INNOVATION & CREATIVITY [20 MARKS]	Evaluate originality & technical differentiation: ■ Originality of concept & creative solution ■ Innovative tech usage & unique capabilities ■ Moves meaningfully beyond obvious/basic ideas	0-5 Little or no originality shown 6-10 Some creative elements present 11-15 Clearly creative & differentiated 16-20 Highly original, compelling approach
03. TECHNICAL IMPLEMENTATION [20 MARKS]	Evaluate technical depth, choices & quality: ■ Appropriate technology, framework & AI choices ■ Technical complexity suited to the problem ■ Seamless component integration & robustness	0-5 Poor / largely incomplete code 6-10 Basic build; limited technical depth 11-15 Good implementation; sound choices 16-20 Strong, technically sound & robust
04. FUNCTIONALITY & PROTOTYPE QUALITY [25 MARKS] [HIGHEST]	Evaluate working solution & operational stability: ■ Core functionality built & works as intended ■ Inputs produce verifiable, meaningful outputs ■ Major modules operate reliably under live demo	0-5 Non-functional / largely incomplete 6-10 Limited functionality; parts missing 11-15 Partially functional; core shown 16-20 Mostly functional; demonstrates well 21-25 Fully functional, reliable & convincing
05. PRACTICALITY & POTENTIAL IMPACT [10 MARKS]	Evaluate real-world feasibility beyond event: ■ Feasibility of solution & practical user value ■ Real-world applicability & scalability potential ■ Viability for continued development / expansion	0-2 Little practical or user value 3-5 Some potential usefulness shown 6-8 Clearly practical; meaningful potential 9-10 Highly practical; strong real impact
06. PRESENTATION & DEMONSTRATION [05 MARKS]	Evaluate communication, clarity & defense: ■ Clear, concise explanation of problem & solution ■ Effective prototype demo within 5-min window ■ Articulate response to judges' inquiries	0-1 Unclear or ineffective presentation 2-3 Adequate presentation & demo 4 Clear, effective & well-structured 5 Highly clear, concise & convincing

TIE-BREAKING RESOLUTION PROTOCOL // ORDER OF PRECEDENCE

[AUTOMATED 4-TIER HIERARCHY]

If two or more teams receive identical cumulative scores, rank order is determined strictly by the following sequence:

STEP_01 Criterion 4 FUNCTIONALITY & QUALITY Higher score in working prototype ranks higher.	->	STEP_02 Criterion 3 TECHNICAL IMPLEMENTATION If still tied, higher technical depth ranks higher.	->	STEP_03 Criterion 1 PROBLEM & RELEVANCE If still tied, higher problem clarity ranks higher.	->	STEP_04 Final Consensus PANEL DELIBERATION If still tied, judging panel confers for final decision.
---	----	--	----	---	----	---

IMPORTANT EVALUATION NOTICE: DOMAIN DIFFICULTY NEUTRALITY

The difficulty level of the selected technology domain will not affect the score. Teams are evaluated strictly on the quality and clarity of the problem they define, the ingenuity of their approach, and the completeness of the working solution they build - rather than on whether they selected a domain perceived as Difficult, Moderate, or Easy.

✓ Equal Domain Weighting

✓ Judged on Code Execution

✓ 0.5-Point Precision Grading
